Workshop Instructions: Week 2

Exploring and Visualizing Datasets

Steps for completing the assignment

1. From the **Files pane** of RStudio, explore the "data" and "scripts" subfolders.

2. **Decide on ONE of the three datasets** in the "data" subfolder to analyse:

   - Febrile Diseases Burkina Faso

   - Motorcycle Accidents in Colombia

   - COVID-19 Patients in the US

     You can learn more about these by reading the "**00_info_about_the_datasets**" PDF.

3. After deciding, open the relevant R script in the "scripts" folder. Add a title, your name, and today's date at the top. Then follow the instructions in the script.

4. You should look at the teacher demo script, which uses a different dataset to illustrate model code for each step.

5. When finished, submit ONLY your R script (not the entire project folder). Although you work in groups, the code you submit should have been typed by you! You will be graded individually.
